Detective

Category Misc Difficulty Easy Points 200

Description: Watson: The criminal's wiped down the crime scene! How can we find them now? Holmes: Elementary, my dear Watson Attached file: out.bmp

The bmp is just an all white picture. After using xxd, we can see how almost everything is ffff

Also notice sometimes there is fffe or fefe. So I assumed there are some pixels in there that are slightly off-white, and tweaking the levels/brightness etc would bring out the blended in image.

Here is the tweaked image, I just turned up the Curves setting. But of course you could also write a script to change the non-ffff values into something darker.
